24.3 Immune System Diseases Lesson Objectives • • • • Explain why allergies occur, and identify common allergens. Describe how autoimmune diseases affect the body.

Chapter 24 the immune system and disease by watabec - Issuu

Overview The immune system comprises diverse biological structures and processes that protect the body from disease. These processes can be classified into innate and adaptive immunity. To work effectively, the immune system needs to detect pathogens by distinguishing the body's own structures from foreign elements.
