3D Elevations. 3D elevations are created by drawing an elevation line in front of a number of objects and then creating a 3D isometric elevation object from them. 3D elevations do not use styles. However, you can control the display of subdivisions within 3D elevations.

About Working With Elevations | AutoCAD Architecture 2018 ...

I have a large amount of short polyline segments that have elevations of ridiculous numbers like 405,000. I don't know the source of these lines but they vary from pline to pline. There can be a 100,000 foot difference between adjacent plines. However, if I select similar and view objects everything..

Setting Polyline Elevation to zero - Autodesk Community

Copy the surface and the spot elevation labels and paste into the other drawing. If the surface is a data shortcut the surface will remain a data shortcut. If it's a source surface it will copy the surface, in which use a modification of Matt's method and create a data shortcut paste the surface into the copied over surface and delete the rest of the surface's definition.

Copying spot elevations between drawings - Autodesk Community

The easiest way to draw the plan, side and front elevation is to colour in the faces of the squares that you would see on the 3D shape from each direction. So if you were drawing the plan view then shade in all pf the faces that you were see from above the 3D shape. This will make it much easier to draw each elevation.
