An engine test stand is a facility used to develop, characterize and test engines. The facility, often offered as a product to automotive OEMs, allows engine operation in different operating regimes and offers measurement of several physical variables associated with the engine operation.. A sophisticated engine test stand houses several sensors (or transducers), data acquisition features and ...

Detuner is a generic term for a jet engine test cell exhaust system muffler.. Aircraft jet engine testing facilities typically require a means to vent and dampen the engine exhaust. The engine exhaust flow is "augmented" with a relatively large flow of cooling air induced by a Venturi effect into the exhaust silencing system, so the exhaust muffler is generally referred to as an "augmenter"

All test cells are accessible to the player only through the use of the console command coc (cell ID), which will teleport the player to the center of the cell. Entering test cells should always be done with caution however, as interacting with objects or characters found within test cells can crash the game or cause other glitches.

A fuel cell makes electricity using the energy released by mixing fuel with air, a reaction which creates water and sometimes also carbon dioxide.The most common fuel for fuel cells is hydrogen, which when reacted with oxygen from air produces only water. Fuel cells work like a battery being constantly fed with fuel so it never runs out (as long as you have enough fuel).
