Meiosis; Interphase •Full set of chromosomes (2N) •DNA has doubled (4N) Prophase I . DNA coils up and spindle form; DNA forms homologous chromosomes that line up with each other and form a 4-part structure called a tetrad. A tetrad consists of 2 homologous chromosomes each made up of 2 sister chromatids.

Meiosis reduces the chromosome number to one set (n) Fertilization restores the diploid number (2n) when the gametes are combined. Ex - sperm cell combines with egg cell. In sexual reproduction, two individuals (parents) contribute genes to the offspring. This form of reproduction results in . greater genetic variation
