In simple words if we define nature and nurture in child development, it can be summed up as follows: Nature. Nature refers to the hereditary factors or the genes of a child, which not only defines a child's physical appearance but also helps in building a child's personality traits. Nurture.

How Does Nature and Nurture Affect Child Development?

The resolution of the nature and nurture controversy is profoundly important in regard to defining the role of parenting in human development. If those endorsing nature as the source of "control" are correct, the fundamental character and attributes of a child are genetically predetermined at conception.

Nature, Nurture and Human Development | Bruce H. Lipton, PhD

There are different influences on child development in relation to nature and nurture. These influences are biological, environmental, societal, and cultural. Nature is responsible for the biological influences. Biological influences are traits that are passed parents to their children.

Nature and Nurture Influences on Child Development Free ...

The nature versus nurture debate is one of the oldest issues in psychology. The debate centers on the relative contributions of genetic inheritance and environmental factors to human development. Some philosophers such as Plato and Descartes suggested that certain things are inborn, or that they occur naturally regardless of environmental influences.

Nature vs. Nurture: Genes or Environment?

The nature of early brain development. At birth, the human brain is still preparing for full operation. The brain's neurons exist mostly apart from one another. The brain's task for the first 3 years is to establish and reinforce connections with other neurons. These connections are formed when impulses are sent and received between neurons.

Nature, Nurture and Early Brain Development | MU Extension

Waterland and Jirtle's (2003) Agouti Mouse Study examines the relationship between nature and nurture, showing how epigenetic mechanisms change gene expression lab mice and, by extension, human beings. The video below provides context for the Agouti Mouse Study, and outlines the development of an epigenetic approach to our understanding of disease.

Nature Nurture in Psychology | Simply Psychology

Nature is known only through the senses, of which sight, touch, and hearing are the dominant ones, and the human notion of reality is skewed toward the objects of these senses. The invention of such instruments as the telescope, the microscope, and the Geiger counter enabled an ever-increasing range of phenomena within the scope of the senses.
